DETAILED ACTION

Request for Continued Examination

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/10/2008 has been entered. Currently claims 43-78 are pending and are under examination herein.

Response to Arguments

The 35 USC 112, first paragraph rejections have been withdrawn as the claims and the subject matter reading on this rejection have been cancelled.

Further, Applicants have amended the claims which are sufficient to overcome the obviousness-type double patenting rejections.

However, as Applicant's have filed new claims the claims will be rejected accordingly below.

Claim Rejections – 35 USC 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 43, 45 rejected under 35 U.S.C. 102(b) as being anticipated by Ammar et al (Egypt J. Pharmacol. Sci. 35, No. 1-6, pg 209-223 (1994)).

Ammar et al. teaches the water solubility of carbamazepine in the presence of nicotinamide (page 210, last sentence of first paragraph and figure 1). It is taught that there are spectral changes occurring between the interaction which may give an indication of a molecular interaction between carbamazepine and the compounds tested, including nicotinamide, which forms a complex-formation between carbamazepine and the compounds (page 217, first paragraph).

Claim Rejections – 35 USC 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 43, 49, 61 and 67 rejected under 35 U.S.C. 103(a) as being unpatentable over de Jong et al. (Dermatology, 1999; 199: 313-318).

De Jong teaches lotion formulations comprised of 5-fluorouracil and urea (see last paragraph in Introduction). It is taught that the formulation has a high diffusion rate in vitro compared to other 5-fluorouracil test concentrations.

De Jong does not specify that the 5-fluorouracil and urea are co-crystals; however, as the claims are drawn to a co-crystal comprising and a composition comprising an API and a co-crystal former, it would be obvious that when the two compounds (5-fluorouracil and urea) are together they will automatically form hydrogen bonds and will be bonded to each other. One would be motivated to formulate a compound or composition with 5-fluorouracil and urea per the teachings of de Jong et al. in which it is taught that the combination provides a high diffusion rate in vivo.

Conclusion

Claims 44, 46-48, 50-60, 62-66, 68-78 are objected to as being dependent on rejected claims.

No claims are allowed.
